

IN THE CLAIMS:

Please amend the claims as follows:

Claims 1-31 (Canceled).

Claim 32 (New): An information recording apparatus for recording record information of particular one kind onto a record medium, on which the record information and reservation information to perform a reserved recording operation for the record information are recordable, the reservation information comprising: a scheduled time to start recording onto the record medium the record information of said particular one kind, which is set in advance for respective one of record mediums including the record medium, among the record information of a plurality of different kinds which are recordable on the record mediums; and a scheduled time to stop recording onto the record medium the record information of said particular one kind, the apparatus comprising:

a read out device for reading out the reservation information from the record medium;

an extraction device for extracting the record information of said particular one kind from among the record information of the different kinds which are inputted from the external;

a record device for starting recording onto the record medium the extracted record information of said particular one kind when it is the scheduled time to start recording and for stopping recording onto the record medium the extracted record information of said particular one kind when it is the schedule time to stop recording, on the basis of the read out reservation information; and

a memory device for storing the reservation information separately from the record medium, wherein

the record device records the record information of said particular one kind in accordance with the reservation information recorded on the record medium in preference to the reservation information stored in the memory device if the reservation information is recorded on the record medium, and

the record device records the record information of said particular one kind in accordance with the reservation information stored in the memory device if the reservation information is not recorded on the record medium.

Claim 33 (New): An apparatus according to Claim 32, the apparatus further comprising

a generation device for generating the reservation information on the basis of the scheduled time to start recording and the scheduled time to stop recording which are set in advance of the reserved recording operation, wherein

the record device records onto the record medium the generated reservation information before recording the record information of said particular one kind.

Claim 34 (New): An apparatus according to Claim 32, wherein

the record medium comprises a disc-shaped type record medium, and

the reservation information is recorded at a most inner-circumferential portion of a recordable area of the disc-shaped type record medium.

Claim 35 (New): An information recording apparatus for recording record information of particular one kind onto a record medium, on which the record information and reservation information to perform a reserved recording operation for the record information are recordable, the reservation information comprising: a scheduled time to start recording onto the record medium the record information of said particular one kind, which is set in advance for respective one of record mediums including the record medium, among the record information of a plurality of different kinds which are recordable on the record mediums; and a scheduled time to stop recording onto the record medium the record information of said particular one kind, the apparatus comprising:

a read out device for reading out the reservation information from the record medium;

an extraction device for extracting the record information of said particular one kind from among the record information of the different kinds which are inputted from the external; and

a record device for starting recording onto the record medium the extracted record information of said particular one kind when it is the scheduled time to start recording and for stopping recording onto the record medium the extracted record information of said particular one kind when it is the schedule time to stop recording, on the basis of the read out reservation information, wherein

the record device further records onto the record medium history information when recording the record information of said particular one kind is finished, the history

information comprising a recording date, a time to start recording, a time to stop recording and a recording position on the record medium, and

the apparatus further comprises a control device for controlling the record device to record new record information of said particular one kind to a non-recorded area on the record medium if there exists the non-recorded area in accordance with the history information, and to record the new record information of said particular one kind to a recorded area where the oldest record information of said particular one kind has been recorded if there does not exist the non-recorded area in accordance with the history information.

Claim 36 (New): An apparatus according to Claim 35, further comprising a generation device for generating the reservation information on the basis of the scheduled time to start recording and the scheduled time to stop recording which are set in advance of the reserved recording operation, wherein

the record device records onto the record medium the generated reservation information before recording the record information of said particular one kind.

Claim 37 (New): An apparatus according to Claim 35, wherein the record medium comprises a disc-shaped type record medium, and the reservation information is recorded at a most inner-circumferential portion of a recordable area of the disc-shaped type record medium.
